

Application No.: 09/628,880
Filed: July 31, 2000
TC Art Unit: 2151
Confirmation No.: 4970

AMENDMENTS TO THE CLAIMS

1. (currently amended) A method of enabling information associations, said method being performed in conjunction with at least one client system and at least one server system, said method comprising the steps of:

in a first accessing step, accessing, at said client system, at least one document, said document containing informational content and having an associated address for use in accessing said informational content,

wherein said first accessing step includes accessing said informational content using said address, said informational content including parsable data;

in a parsing step, parsing, on one of said client system and said server system, said parsable data included in said informational content contained within a document to identify a number of objects included in said document;

in an a second accessing step, accessing, from at least one database, information related to those of said identified objects included in said document for which related information is available;

Application No.: 09/628,880

Filed: July 31, 2000

TC Art Unit: 2151

Confirmation No.: 4970

in a first displaying step, displaying, on a display of said client system, at least ~~a portion~~some of those of said identified objects for which related information is available;

in a detecting step, detecting, on said client system, a selection, by a user, of one of said objects displayed on said display ~~by a user~~; and

in a second displaying step, displaying, on said display, information from said at least one database related to said selected one of said objects.

2. (currently amended) The method of claim 1, wherein said first displaying step comprises displaying said document including said objects, and providing visual indications to said user of at least ~~a portion~~some of those of said objects for which related information is available.

3. (currently amended) The method of claim 1, further comprising:

detecting an operation in which said document is being loaded by an application program; and

wherein said second accessing step comprises comparing said objects within said document with entries in said at least one

Application No.: 09/628,880

Filed: July 31, 2000

TC Art Unit: 2151

Confirmation No.: 4970

database, said second accessing step being performed in response to said detecting of said operation in which said document is being loaded by said application program.

4. (currently amended) The method of claim 3, wherein said second accessing step further comprises accessing, from said at least one database, information related to at least one of said objects within said document in the event that said at least one of said objects within said document matches at least one of said entries in said at least one database.

5. (previously presented) The method of claim 3, wherein said loading of said document by said application program comprises downloading of said document onto said client system using a browser program.

6. (original) The method of claim 3, wherein said loading of said document into said application program comprises loading said document into a word processor program.

Application No.: 09/628,880

Filed: July 31, 2000

TC Art Unit: 2151

Confirmation No.: 4970

7. (original) The method of claim 3, wherein said loading of said document into said application program comprises loading said document into an email program.

8. (previously presented) The method of claim 1, wherein said information from said at least one database related to said selected one of said objects comprises at least one indication of at least one related resource, and further comprising:

detecting a selection of said indication of said at least one related resource by said user; and

outputting content associated with said at least one related resource in response to said detecting said selection of said indication of said at least one related resource.

9. (previously presented) The method of claim 8, wherein said at least one indication of said at least one related resource comprises at least one uniform resource locator associated with said at least one related resource.

10. (previously presented) The method of claim 8, wherein said at least one related resource from said at least one database comprises streaming audio information.

11. (previously presented) The method of claim 8, wherein said at least one related resource from said at least one database comprises streaming video information.

12. (previously presented) The method of claim 1, further comprising:

in a monitoring step, monitoring user activities on said at least one client system, said user activities indicating levels of interest of at least one user of said at least one client system in said objects included in said document;

determining at least one rating of at least one of said document, said objects, and said information related to said objects in response to said monitoring of said user activities on said at least one client system; and

storing said at least one rating in association with at least one of said at least one user, said document, said objects, and said information related to said objects, wherein said at least one rating can be applied to future requests for information related to said objects.

Application No.: 09/628,880

TC Art Unit: 2151

Confirmation No.: 4970

13. (currently amended) A computer program product including a computer readable medium, said computer readable medium having program code stored thereon, said program code comprising:

first program code for accessing, at at least one client system, at least one document, said document containing informational content and having an associated address for use in accessing said informational content,

wherein said first program code for accessing at least one document includes program code for accessing said informational content using said address, said informational content including parsable data;

program code for parsing, on one of said at least one client system and at least one server system, said parsable data included in said informational content contained within a document to identify a number of objects included in said document;

second program code for accessing, from at least one database, information related to those of said identified objects included in said document for which related information is available;

first program code for displaying, on a display of said client system, at least a ~~portion~~ some of those of said identified objects for which related information is available;

program code for detecting, on said client system, a selection, by a user, of one of said objects displayed on said display ~~by a user~~; and

second program code for displaying, on said display, information from said at least one database related to said selected one of said objects.

14. (currently amended) The computer program product of claim 13, wherein said first program code for displaying comprises displaying said document including said objects, and providing visual indications to said user of at least ~~a portion~~ some of those of said objects for which related information is available.

15. (currently amended) The computer program product of claim 13, further comprising:

program code for detecting an operation in which said document is being loaded by an application program;

wherein said second program code for accessing comprises comparing said objects within said document with entries in said at least one database, said second program code for accessing being executed in response to an execution of said program code

for detecting said operation in which said document is being loaded by said application program.

16. (currently amended) The computer program product of claim 15, wherein said second program code for accessing further comprises program code for accessing, from said at least one database, information related to at least one of said objects within said document in the event that said at least one of said objects within said document matches at least one of said entries in said at least one database.

17. (previously presented) The computer program product of claim 15, wherein said program code for detecting said operation in which said document is loaded into said application program comprises program code for detecting downloading of said document onto said client system through a browser program.

18. (original) The computer program product of claim 15, wherein said program code for detecting said operation in which said document is loaded into said application program comprises program code for detecting loading of said document into a word processor.

Application No.: 09/628,880

Filed: July 31, 2000

19. (original) The computer program product of claim 15, wherein said program code for detecting said operation in which said document is loaded into said application program comprises program code for detecting loading of said document into an email program.

20. (previously presented) The computer program product of claim 13, wherein said information from said at least one database related to said selected one of said objects comprises at least one indication of at least one related resource, and further comprising:

program code for detecting a selection of said indication of said at least one related resource by said user; and

program code for outputting content associated with said at least one related resource in response to said program code for detecting said selection of said indication of said at least one related resource.

21. (previously presented) The computer program product of claim 20, wherein said at least one indication of said at least one resource comprises at least one uniform resource locator associated with said at least one related resource.
